(245 CS-3): Graduation Project:

The course aims to train the students to conduct the research operations that are necessary for the applications of computer projects, then it carries out the analysis and the design necessary to get out the final draft of the project before moving on to apply what has been designed, and to select the applications necessary to examine the program before the final version of it was delivered. The students work in a team to analyze, design, and manage software project. The graduation project includes designing, applying, examining, and evaluating the outcomes of the project.
